

On the Subject of The Pigpen Cycle

Oink.

This module consists of a screen, eight dials with pink labels, and a QWERTY keyboard.

The labels on the dials, when decrypted and read from left to right, spell out an eight letter word.

Each letter is translated using the pigpen cipher below.

Starting from north, the pigpen characters are rotated to face the direction the dial is pointing.

The rotated pigpen characters are then translated back, as though they are still facing north, to produce the encrypted letter.

Once deciphered, find the word in the table below, the word written below it is the word that should be entered.

Apply the same encryption to the response word, and type out the encrypted response word using the keys.

The word is automatically submitted when eight keys are pressed.

The red button can be pressed at any time before the eighth key is pressed to cancel the input.

Inputting any of the eight letters incorrectly will cause a strike to be issued and reset the module.
