

On the Subject of Misery Squares

I guess this will be the continuation of Simon Shrieks manual.

The module consists of 20 squares, 10 above and 10 below, 5 different displays in the middle, and a Submit button.

The 10 squares above the displays will show different color patterns. To solve the module, locate the initial sequence of the pattern above using the 1000 by 1000 pixel image and locate the continuation of the sequence. The sequence can happen vertically, horizontally, or diagonally. If the image ends, loop back to the opposite side of the image to continue. Color the squares below the displays with the same colors as the continuation of the sequence.

Display Guide

5 displays. How do they work?

Center Display (The Color Guide Switch)

This is an optional switch that allows you to enable the **Color Guide**. When enabled, it allows the bottom displays to function. You are not able to disable the guide unless the module resets.

Top-Left Display (The Square Identifier)

This display shows the current square the module is focused on. You can press the display to switch the square that is being focused. By default, the display is only focused on the squares on the bottom layer.

Top-Right Display (The Color Swapper)

This display allows you to switch the color of the current square the module is focused on. This display will only work if the squares that the module is focused on is on the bottom layer.

Bottom-Left Display (The Layer)

If the guide is enabled, this display allows you to toggle the layer of squares that the module will focus on. This will be either the top layer or the bottom layer.

Bottom-Right Display (The Actual Color Guide)

If the guide is enabled, this display will show you the current color of the focused square.
