

On the Subject of Organization

Order! Order! Order!

WARNING! WARNING! This is a Boss Module! This means that it depends on either solves or a timer and if anything is done wrong it can seriously screw with your bomb, you have been warned...

This module has a notebook themed display which shows a module's name. It also has a switch towards the top right and a button that says "Continue?" in the bottom left.

To solve this module the defuser must solve every single module in a certain order dictated by the module. The module on the notebook display is the next one to be solved, and it will update to show the next module when the "Continue?" button is pressed. But be warned, the switch needs to be in a certain position before the "Continue?" button is pressed, which is determined in the table on Page 2. A list of other modules that Organization ignores (i.e. they don't show up ever in an Organization's order and can be solved on their own time without penalty) called **Ignored Modules** is on Page 2. Another list on Page 3 called **Moved To Back** shows all modules Organization will always move to the back of its order (mainly because they can take a while).

If the defuser presses continue when the displayed module is not solved or the position of the switch is in the wrong position when "Continue?" is pressed, a strike will be recorded and the module will NOT reset. A strike will also be recorded if any module is solved that is not on an Organization's display and that module not on the display will be removed as future possibility.

In the case of Multiple Organizations...

- Any module on any Organization's notebook display can be solved without penalty (except for the cases below)
- If any Organization needs their button pressed (signified by an arrow on the bottom of the notebook display if there is multiple Organizations) like with 1 Organization a solve before this button is pressed after 1 has already occurred will cause a strike to be recorded
- If any Organization that doesn't need their button pressed doesn't have the name of the module just solved on display then ALL Organizations in this state will record a strike

Switch Position Table

Use this table to determine the position of the switch before moving onto the next module.

Rule	Position
If the current number of solved modules is a multiple of 3 move the switch...	UP
Otherwise, if the module's name currently displayed has an even number of vowels (excluding Y) move the switch...	DOWN
Otherwise, if a DetonATO, The London Underground, or Unfair Cipher was just solved move the switch...	UP
Otherwise, if 2 solves ago the displayed module started with an 'S' move the switch...	DOWN
Otherwise, if the bomb has an SND indicator move the switch...	UP
Otherwise, if a Forget This is on the bomb move the switch...	DOWN
Otherwise, if the bomb has 2 batteries or less move the switch...	UP
Otherwise, move the switch...	DOWN

Ignored Modules

- Divided Squares
- Turn The Key
- Turn The Keys
- The Swan
- Cookie Jars
- The Time Keeper
- Hogwarts
- Forget Me Not
- Forget Everything
- Forget This
- Forget Them All
- Forget Enigma
- Forget Perspective
- Forget Us Not
- Souvenir
- Tallordered Keys
- Tax Returns
- Purgatory
- Colour Code
- Planets
- Four-Card Monte
- Laundry
- Press X
- The Stare
- The Stopwatch
- The Troll
- Langton's Ant
- Big Circle
- Black Hole
- Blind Maze
- A Mistake

Moved To Back

- The Jewel Vault
- Turtle Robot
- Lightspeed
- Number Nimbleness
- 3D Maze
- Bomb Diffusal
- Old Fogey
- Button Grid
- Simon Sings
- Vectors
- Game of Life Cruel
- Mastermind Cruel
- Simon Sends
- The Hypercube
- The Ultracube
- Lombax Cubes
- Bamboozling Button
- Simon Stores
- The Cube
- The Sphere
- LEGO_s
- Unfair Cipher
- Ultimate Cipher
- Bamboozled Again
