

## On the Subject of Odd One Out

*One of these things is not like the others! One of these things just doesn't belong!*

There are six buttons on the module which may display a variety of things directly on the button or in the display whilst hovering over a button. Five of the buttons, referred to below as the “good buttons”, satisfy a specific property which is described in the table below. Press the button that doesn't belong — the “odd one out” — to move on to the next stage. The current stage is indicated by LEDs at the top of the module.

Once 5 stages have been completed, press the button that has had the correct answer a unique number of times to disarm the module.

You may long-press any button to reset the module back to stage 1.
