

## On the Subject of Planets for Cheaters

*Why do people do this... The Milky Way shouldn't be on a bomb! But not a problem!  
Here is a cheat.*

This module consists of a planet, a keypad (0-9), a delete button and a space button.

### Use this formula to calculate the solution:

Multiply:

((strip1 x strip2 x strip3 x strip4 x strip5 (Table1) +/- No.from Table2) x Table3)  
x  
(123x PlanetNo + 5x Batt + 6x Lit Ind + 4x Ports + 462 + 10x Solves)

Strips are numbered from top to bottom.

### Useful tips and common mistakes:

is a picture of all the planets in our solar system.

BE CAREFUL WITH THE STRIP COLORS. Green looks almost like Lime. And Orange looks similar to yellow.

Planet Number Reference
