

On the Subject of Function Value

Substitution under pressure.

- When the needy module activates, it displays a function and a requested input.
- Substitute the displayed input for x and evaluate the function.
- Press the button containing the resulting value.
- An incorrect answer records a strike and deactivates the module.
- Failing to answer before the needy timer expires also records a strike.

Example

If the display shows $f(x) = 2x + 3$ and $f(4) = ?$, press 11.

40

$f(x) = 2x + 3$
 $f(4) = ?$
